

Abstract of the Disclosure

ALIPHATIC POLYESTER RESIN COMPOSITIONS, MOLDED ARTICLES OF  
ALIPHATIC POLYESTER RESIN AND METHOD OF PRODUCING SAME

5

Molded articles with improved physical characteristics are obtained under molding conditions for general resin without causing deformation at the mold releasing time if a composition containing aliphatic polyester resin and one or more metal salts of aromatic sulfonate of a specified kind is used. Such a composition is placed inside a

10 mold maintained at a temperature below the crystallization-initiating temperature by differential scanning calorimetry and above the glass transition temperature is molded while it crystallizes.
